EXPLANATORY FILM „CORONA-WARN-APP"

With the Corona-Warn-App, you can help to interrupt chains of infection.

With minimal effort and with maximum data protection.

The Corona-Warn-App does not know who you are.

But it can accompany you. So that you can better protect yourself and the people around you.

Whenever you encounter another user, your smartphones automatically exchange encrypted random codes.

These random codes only tell the smartphones that two people have encountered each other, for how long and how far apart they were.

They disclose neither names nor locations.

The other user will therefore never find out that their smartphone has exchanged a code with yours. Your identity will remain secret.

The codes are deleted from your smartphone after 14 days.

If it is proven that a user has been infected, they can choose to anonymously make their random codes available to all other users. – And to you as well.

Your app finds the code that your phone exchanged with the infected person's smartphone and informs you that you came into contact with them.

At the same time, it provides you with clear recommendations for what to do. You will remain anonymous at all times.

The successful fight against the coronavirus can only be won if we work together. You can play your part, too! With the Corona-Warn-App, you protect yourself and those around you.

Download the Corona-Warn-App now and fight the coronavirus together.
